

Kudos borderless calibration

A5 landscape, 210 x 148 mm - the sheet one A6 card folds from.

Print it exactly like this

Paper size: A5 BORDERLESS, LANDSCAPE - 210 wide x 148 tall. Not 148 x 210: a portrait page size cannot match this sheet, and borderless then never engages. That is the single most likely reason a previous attempt came back with a white border.

Scaling: Actual size / 100%. Never "Fit" or "Shrink oversized pages".

Media type: whatever you use for cards. Extension: leave where it normally sits.

Then read it, in this order

1. Is there ANY white paper outside the grey band, on any edge? If yes, borderless did not engage - fix the paper size above and print again. Nothing else on this sheet means anything until the grey runs off all four edges.
2. At the middle of each edge, find the shallowest numbered step still visible. That edge loses a little less than that number. Write all four below.
3. Do the full frames get cut on one side but not the other? That is the sheet feeding off-centre, and it is worth saying so - a single number cannot correct it.

TOP

RIGHT

BOTTOM

LEFT

_____ mm

_____ mm

_____ mm

_____ mm

Is LEFT the same as RIGHT? YES / NO

Is TOP the same as BOTTOM? YES / NO

Send all four numbers back, not just one. If they differ, say so - that is the finding, not a measuring error.
